## WonderDish

The WonderDish is an imaginative site furnishing that includes an interactive sound feature, which is sometimes referred to as a “whisper dish”. Comfortable bench seating and a six foot parabolic dish are integrated into a sleek, sculptural form. Installed in pairs, voices (even whispers) carry over a distance between each WonderDish. This durable seating-with-sound invention is appropriate for parks, gardens, museums, hospitals, therapy facilities, select playgrounds and discerning institutions for its functional, sensory-rich, inclusive and educational aspects.

The WonderDish can be enjoyed by young and old alike, encouraging multi-generational interaction and experiential learning. Users discover their own favorite ways to appreciate the features that this dramatic product offers, all in a fun and dynamic setting. As a therapeutic device, this product fosters communication.

The geometric properties of the parabolic reflector enable sounds to be transmitted and received without need for power or electricity. The bench portion is intended to be used as a seat when speaking, listening, or for just relaxing while the adjacent dish area doubles as a cozy backrest. The centrally locatedommel feature, which can also be used to lean on, is the guide for locating the optimal point for speaking and listening.

The WonderDish is manufactured in the United States to demanding specifications in glass fiber reinforced concrete. The innovative design is both weather and vandal resistant and will provide years of low maintenance service. This product may be ordered in both standard or custom colors and is easily installed.

Each WonderDish uses a parabolic reflector to focus sound waves toward the other at distances up to 200'.

### ***WonderDish Information and Specifications***

- Unique site furnishing that integrates seating and sound
- Seating area is approximately equal to a 6 foot bench
- Parabolic dish has a 6 foot diameter
- Installed in pairs at distances up to 200 feet
- Focal point is 12" up from pommel and 20" back from dish
- Numerous additional acoustic properties and effects
- Totally passive, no power or electricity required
- Each WonderDish accommodates single or multiple users
- Crafted in glass fiber reinforced concrete (GFRC)
- Sculptural base seating feature
- Standard and custom colors available
- The seat height is suitable for wheelchair transfer
- Overall dimensions (includes dish):  
72" wide x 48" deep x 79" tall, 875 pounds each
